AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and proteins and polynucleotides may be used in the prevention, diagnosis and that affect they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome complement the patients own production of (I). Additionally, (I) supplement the patients own production of (I). Additionally, (I) supplement the patients own production of (I). Additionally, (I) proteins and bolynucleotides may be used to prevent, proteins and polynucleotides may be used to prevent, concerns and cancer metastases of haematopoietic related disasses, especially cancers and cancer metastases of haematopoietic antigen genomic to AAK64703 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK64509 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 11; SEQ ID NO 13520; 3071pp + Sequence Listing; English.

The inventoring tenders to mover number secreted polypeptides, and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells for use in treatment of a pathology related to aberrant expression or bysiological interactions of the polypeptides and cells agent to physiological interactions of the polypeptides and cells genetically or the nucleic acids encoding the polypeptides and cells genetically of the proteins are useful in genetic vaccination, testing and consequences them are also useful for producing the polypeptides of cells genetically the proteins are useful in genetic vaccination, testing and consequences tendon as nutritional supplements. They may be used to bone, cartilage, tendon and/or nerve tissue growth or regeneration; cimmune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU39510-AAU33304 represent the amino acid over the consequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy -

Human secreted protein encoded by gene No. 32.

30-SEP-1999 (first entry)

AAY38429;

```
This sequence represents a secreted human protein encoded by the gene fusion perceins by linking to the gene to a human immunoglobulin Feroreins by linking to the gene to a human immunoglobulin Feroreins by linking to the gene to a human immunoglobulin Ferorein as compared to the human protein only.

The invention relates to 36 novel genes and their fragments (nucleic which are useful for preventing, treating or ameliorating medical sequences. AAZ06219-206263; amino acid sequences AAX08386-738498) conditions e.g. by protein or gene therapy. Also, pathological conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 36 year haznézia for heavel the new polynucleotides. Specific uses are described for each of the 36 year haznézia for highly expressed in

SUBCELLULAR LOCATION: Integral membrane protein (Probable).

TISSUE SPECIFICITY: EXPRESSED IN KIDNEY >> PERIPHERAL BLOOD
LEUKOCYTES >> LUNG >> PLACENTA = SPLEEN >> SMALL INTEGRINE.

DISEASE: DEFECTS IN SIC7A7 ARE A CAUSE OF IXSINIBLE PROTEIN
INTOLERANCE (LPI). LPI IS AN AUTOSOMAL RECESSIVE MULTISYSTEM
DISORDER FOUND MATINI: IN FINIAND AND ITALY. ON A NORMAL DIET, LPI
PATIENTS PRESENT POOR FEEDING, VOMITING, DIARRHEA, EPISODES OF
HYPERAMMONIABMIC COMA AND GROWTH RETARDATION. HERATOSPLENOMEGALY,
OSTEODOROSIS AND A LIFE-THREATENING PULMONARY INVOLVERENT
(ALVEOLAR PROTEINOSIS) ARE ALSO SEEN. BIOCHEMICALLY LPI IS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mykkaenen J., Torrents D., Pineda M., Camps M., Yoldi M.E.,

                                                                                                                                                                      40 kba SUBBUNIT BINDS ATP.

-1- SUBBUNIT BINDS ATP.

-1- SUBBUNIT HETEROPENTAMER OF SUBBUNITS OF 140/145, 40, 38, 37, AND 36.5 kba THAT FORMS A COMPLEX WITH PCNA IN THE PRESENCE OF ATP.

-1- SUBCELLULAR LOCATION: Nuclear (Probable).

-1- DISEASE: Haploinsufficiency of RFC2 may be the cause of certain cardiovascular and musculo-skeletal abnormalities observed in williams. Beuren syndrome (WBS), a rare developmental disorder. It is a contiguous gene deletion syndrome involving genes from chromosome band 7911.23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-OCT-1996 (Rel. 34, Last sequence update)
01-OCT-1996 (Rel. 34, Last annotation update)
Activator 1 40 kDa subunit (Replication factor C 40 kDa subunit) (Al 40 kDa subunit) (RF-C 40 kDa subunit)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: BELONGS TO THE ACTIVATOR 1 36 TO 40 kDa SUBUNITS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G -> L (IN REF. 1; AA SEQUENCE).

SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MANY AMINO ACID
PERMEASES. GLYCOPROTEIN-ASSOCIATED AMINO ACID TRANSPORTERS (GPAAT)
                                                                                                                                                                                                                                                                                                                                                                                                                 TRANSPORT PROTEIN SLC3A2/4F2HC.
SUBCELLULALAR LOCATION: Integral membrane protein (Probable).
TISSUE SPECIFICITY: EXPRESSED HERATOMA BUT NOT IN NORMAL LIVER.
ALSO EXPRESSED IN PLACENTA, TESTIS, BRAIN, OVARY, SPLEES, MAMMARY
                                                                                                                                                                                                                                                                                                                  Sang J., Lim Y.P., Panzica M., Finch P., Thompson N.L.;

--- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
--- TSSUE SPECIFICITY: MAINLY EXPRESSED IN KIDNEY AND INTESTINE.
--- SIMILARITY: BELONGS TO A FAMILY THAT GROUPS MANY AMINO ACID
--- PERMEASES. GLYCOPROTEIN-ASSOCIATED AMINO ACID TRANSPORTERS (GPAAT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NEUTRAL AMINO ACIDS. HAS HIGHER AFFINITY FOR L-PHENYLALANINE THAT LATI. L-AARAINE IS TRANSPORTED AT PHYSTOLOGICAL CONCENTRATIONS. PLAYS A ROLE IN BASOLATERAL (RE)ABSORPTION OF NEUTRAL AMINO ACIDS. SUBUNIT: DISULFIDE-LINEED HEFERODIMER WITH THE AMINO ACID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "LAT2, a new basolateral 4F2hc/CD98-associated amino acid transporter
